

A Step-By-Step Guide to BirdNET Analyzer

Rebecca Cohen, Irina Tolkova, Meghan Beatty, Spencer Keyser, Isha Bopardikar, Chiti Arvind, V.V. Robin

Adapted and updated from materials previously created by Ashraft Syazwan Ahmady Yusni, Nor Amira Abdul Rahman, Maria Vasilkin, and Dena Clink, and based on: Symes L, Sugai LSMS, Gottesman B, Pitzrick M, Wood C. 2023. Acoustic analysis with BirdNET and (almost) no coding: practical instructions. <https://doi.org/10.5281/zenodo.8357176>

The data and downloads for this guide can be found [here](#)

Part 1: Software Install

1.1 BirdNET Analyzer v.2.4.0

1. Download BirdNET Analyzer v2.4.0 installer from the [BirdNET GitHub repository](#) releases page
 - BirdNET-Analyzer-2.4.0-win_amd64.exe for Windows
 - BirdNET-Analyzer-2.4.0-mac_arm64.pkg for MAC
2. Double click the downloaded installer file to run it; you may need to tell your computer that it is safe to run. Click **More info** and **Run anyway**.

3. Accept the license agreement and click **Next**. Check the box to create a desktop shortcut and click **Next**. Click **Install**.

1.2 Raven Annotate Pre-Release Build (install optional)

Raven Annotate is a new Raven Workbench module that is intended to replace Raven Pro's functionality for visualizing raw audio files, annotating acoustic events, making automatic feature measurements, and more. Raven Annotate is still in development and has not yet been publicly released, but the basic visualization and annotation functionality is up and running in this build. New functionality will continue to be developed and released in coming months. **If you have Raven Pro or Raven Lite already installed, it is optional to install Raven Annotate.**

1. Use one of the following links to download the appropriate Raven Annotate installer, according to your operating system:
 - a. Windows: https://updates.ravensoundsoftware.com/updates/workbench/raven_annotate/win_x64/Raven-Annotate-1.0.2.exe
 - b. MacOS: https://updates.ravensoundsoftware.com/updates/workbench/raven_annotate/mac_arm64/Raven-Annotate-1.0.2.dmg
 - c. Linux: https://updates.ravensoundsoftware.com/updates/workbench/raven_annotate/linux_x64/raven-annotate_1.0.2-1_amd64.deb
2. Locate the installer in your Downloads folder and double click to run.

3. Follow the prompts to complete installation by accepting the license agreement and clicking **Install**.

Part 2: Detecting with BirdNET Model V2.4

2.1 Download workshop materials

1. From the [GitHub](#) page, **download workshop repository** “IISER_YC_AdvancedBioacoustics” as a **zip file**. This repository contains all of the data and code we will be using for the modules we’ll cover this week. Slide decks will be added at the end of the workshop.

2. **Unzip the folder** and store it in a convenient location on your computer.

2.2 Running BirdNET Analyzer on Bird Data

1. From your Desktop, **double-click the BirdNET icon to launch BirdNET-Analyzer**. It may take a minute for the program to open.

2. Navigate to the **Batch analysis** tab.

3. Click **Select input directory** and navigate to *IISER_YC_AdvancedBioacoustics >> Modules >> DetClass_ML >> Data >> Testing >> Audio Files >> Terrestrial*.

- Click **Select output directory and navigate to** *IISER_YC_AdvancedBioacoustics >> Modules >> DetClass_ML >> Data >> DefaultModel >> Terrestrial >> Predictions*.

Commented [1]: Redo first screenshot once terrestrial data are in the repository

- At the bottom of the screen, click **Analyze**. A progress bar will appear. When the analysis is complete it will switch to the message "All files analyzed!" Navigate to *IISER_YC_AdvancedBioacoustics >> Modules >> DetClass_ML >> Data >> DefaultModel >> Terrestrial >> Predictions* to see the output selection table.

Part 3: Performance Evaluation

3.1 Viewing Annotations and Audio in Raven Annotate

1. Launch Raven Annotate, Pro, or Lite. Select **File ~ Open Sound Files**. Navigate to *IISER_YC_AdvancedBioacoustics >> Modules >> DetClass_ML >> Data >> Testing >> Audio Files >> Terrestrial* and select the audio file 05_28_21_colorado_refuge_first5min.wav then click **Open**.

2. A dialogue box will appear. Uncheck the box for “Use file timestamps for real time axis labels”. Click **OK** and the data will load.

3. Zoom in on the x-axis by clicking the **+** in the bottom right corner of the spectrogram panel. Use the x-axis scroll bar to navigate to the start of the file.

4. Select **File >> Import Raven Pro Table**. Navigate to *IISER_YC_AdvancedBioacoustics >> Modules >> DetClass_ML >> Data >> DefaultModel >> TerrestrialPredictions* and select *5_28_21_colorado_refuge_first5min.BirdNET.selection.table.txt*, then click **Open**.

3.2 Quantifying Model Performance with BirdNET

1. Click on the **Evaluation** tab. Click **Select annotation directory**, navigate to *IISER_YC_AdvancedBioacoustics >> Modules >> DetClass_ML >> Data >> Testing >> GroundTruthAnnotations>>Terrestrial*, and click **Select Folder**.

2. Click **Select prediction directory**, navigate to *IISER_YC_AdvancedBioacoustics >> Modules >> DetClass_ML >> Data >> DefaultModel >> Terrestrial >> Predictions*, and click **Select**

5. Repeat process with marine ground truth (*IISER_YC_AdvancedBioacoustics >> Modules >> DetClass_ML >> Data >> Testing >> GroundTruthAnnotations>>Marine*) and marine BirdNET predictions (*IISER_YC_AdvancedBioacoustics >> Modules >> DetClass_ML >> Data >> DefaultModel >> Marine >> Predictions*).

3.3 Quantifying Model Performance with Custom Scripting

6. Launch the workshop R Project by navigating to the downloaded GitHub repository folder *IISER_YC_AdvancedBioacoustics* and double clicking the file *IISER_YC_AdvancedBioacoustics.Rproj*.

7. In the **Files** pane of the RStudio session, navigate to *IISER_YC_AdvancedBioacoustics* >> *Modules* >> *DetClass_ML* >> *Code* and click *PerfEval.R* to open the script.

8. Update the anotDir variable path in line 14 to *IISER_YC_AdvancedBioacoustics* >> *Modules* >> *DetClass_ML* >> *Data* >> *Testing* >> *GroundTruthAnnotations* >> *Terrestrial*

9. Update the `detDir` variable path in line 18 to *IISER_YC_AdvancedBioacoustics*
>> Modules >> DetClass_ML >> Data >> DefaultModel >> Terrestrial >> Predictions

```

14. In Windows Explorer or Finder, navigate to *IISER_YC_AdvancedBioacoustics* >> *Modules* >> *DetClass_ML* >> *Data* >> *DefaultModel* >> *TerrestrialPredictions* to view output figures.

15. Repeat process for marine data predictions. Update the `detCol` variable in line 20 to "Species"

Part 4: Custom BirdNET Models

We can use BirdNET to detect sound classes that it was not originally trained on by applying transfer learning with a modest amount of training data. To train a custom BirdNET model, you need a training dataset consisting of short sound clips from both the target class(es) (specific species or sound type(s)) and at least one non-target class (e.g. background noise).

4.1 Training a Custom Model

1. We will train a custom model with two classes: Killer Whale and Noise. BirdNET will use all training data folders in the directory you point it towards, so we'll need to reorganize the data slightly so that each team uses a different number of training examples. In the workshop folder, navigate to *Modules >> DetClass_ML >> Data >> Training*. **Select and cut all killer whale training data folders except the one assigned to your group. Paste them up one level, directly into the Data folder.**

2. In **BirdNET Analyzer**, navigate to the **Train** tab. Click **Select training data**, navigate to **Modules >> DetClass_ML >> Data >> Training**, and click **Select**.

3. Click **Select classifier output**, navigate to **Modules >> DetClass_ML >> Data >> CustomModel**, and click **Select**. You can also specify a name for your custom model (by default it will be called "CustomClassifier").

- Set the **Maximum bandpass frequency (Hz)** to 10000. Click the box next to **Use autotune** to implement automatic hyperparameter optimization.

5. Scroll to the bottom of the train tab and click ***Start training***.

4.2 Deploying a Custom Model

1. In the **Batch analysis** tab, click **Select input directory** and navigate to *IISER_YC_AdvancedBioacoustics >> Modules >> DetClass_ML >> Data >> Testing >> Audio Files >> Marine*.

2. Click **Select output directory** and navigate to *IISER_YC_AdvancedBioacoustics >> Modules >> DetClass_ML >> Data >> CustomModel*, select *Predictions*, and click **Select folder**.

- Under **Inference settings**, set **Maximum Bandpass Frequency (Hz)** to 10000

Inference settings

Picks the top N species sorted by confidence score.

☐ Use top N species

Sensitivity

Adjust the distribution of prediction scores. Higher values result in higher scores.

1

↺

0.5

1.5

Merge consecutive detections

Number of consecutive detections that are merged for each species. Combines N consecutive detections into one.

1

↺

1

10

Minimum bandpass frequency (Hz)

Note that frequency cut-offs should also be used during training in order to be effective here.

0
